WASTE MANAGEMENT

Waste management is the key to solving our planet's pollution problem.

The most important question to be answered is;

Where do I dispose a product without harming our planet?

Here is our waste disposal guide:

						
WHERE TO DISPOSE		LANDFILL (TRASH)	HOME COMPOST	INDUSTRIAL COMPOST	RECYCLE BIN	HOT WATER
M A T E R I A L	BAGASSE	✓	✓	✓	✓	✗
	CORNSTARCH	✓	✓	✓	✓	✗
	WHEAT STRAW	✓	✓	✓	✓	✗
	KRAFT PAPER	✓	✓	✓	✓	✗
	PLA	✗	✗	✓	✗	✗
	BIRCHWOOD	✓	✓	✓	✓	✗
	BAMBOO	✓	✓	✓	✓	✗
	GLASS	✗	✗	✗	✓	✗
	RPET	✗	✗	✗	✓	✗
	PVOH	✓	✓	✓	✓	✓
	ALUMINUM	✗	✗	✗	✓	✗

MORE ABOUT EACH PROCESS

For more information visit our website www.ncdcorporation.com

	PROCESS	DURATION	WHAT IT BECOMES
 LANDFILL (TRASH) 	The product will disintegrate because it is 100% natural and plastic free, it is landfill biodegradable.	30 to 180 days →	Gas & Leachate
 HOME COMPOST 	The product will decompose in a home composting environment at lower temperature then an industrial facility, it is 100% natural and plastic free.	30 to 180 days →	Organic fertilizer
 INDUSTRIAL COMPOST 	The product will not decompose in a home composting environment, it needs the higher temperature found at industrial facility, it is 100% natural and plastic free.	30 to 180 days →	Organic fertilizer
 RECYCLE BIN 	The product doesn't decompose in nature nor in industrial facility, it contains plastic or glass and the best way to dispose of is to recycle it.	Recycle process →	Paper, Plastic, Clothes, etc.
 HOT WATER 	The product dissolves instantly in hot water between 60°C and 90°C depending on the product.	Dissolves Instantly →	Water & Carbon Dioxide

Always consult and follow your municipality waste management guidelines as it may differ depending on your location due to local laws and facilities.

A photograph of a person's hands hugging a tree trunk. The tree bark is dark and textured. A red, heart-shaped mark is visible on the bark, partially covered by the hands. The background is a soft-focus forest with warm, golden light. A semi-transparent grey banner is overlaid across the middle of the image.

ABOUT BAGASSE

Sugarcane fiber byproduct; it is the dry pulp residue that remains after the extraction of the juice from the sugar cane.

HEALTH AND ENVIRONMENTAL BENEFITS

Made of organic and annually renewable resources

100%

Biodegradable & compostable

Chlorine-free, non-toxic, water and soya-based ink

CARE AND USE

Suitable for hot and cold foods up to 120°C

Freezer safe

Microwave safe

Bagasse is compostable both at home and commercially and can decompose in less than 90 days under the right conditions. Crushing bagasse products before composting significantly speeds up this process.

THE BAGASSE BEGINS TO BREAKDOWN WHEN EXPOSED TO:

HOW TO COMPOST THE BAGASSE

About styrofoam trays DID YOU KNOW?

Food and environmental contaminant

Food in Styrofoam containers can be contaminated by chemicals that leach into the food, affecting human health and the reproductive systems.

Styrofoam appears to last forever as it is resistant to photolysis, or the breaking down of materials by photons originating from a light source. Cleveland State University states that **it requires more than a million years to decompose.**

The amounts of Styrofoam waste that accumulates is colossal. Problems created due to large amounts of waste include the following:

- Styrofoam easily breaks into small bits. Small land and aquatic animals eating these pieces die due to toxins and blockage of their stomachs leading to starvation.
- Polystyrene has accumulated along coasts and waterways around the world. It is one of the main components of marine debris.
- It absorbs many other carcinogenic pollutants in the sea water like DDT. Much of it sinks to the bottom of the sea where it pollutes the seabed. When the fish eat toxic materials in Styrofoam and the additional pollutants it absorbs, the chemicals bioaccumulate and can harm people who consume this seafood.

Non-Sustainable

Another reason that Styrofoam is harmful for the environment is that it is made with petroleum, a non-sustainable resource which creates heavy pollution. A 2016 Worldwatch Report notes that "About 4 percent of the petroleum consumed worldwide each year is used to make plastic, and another 4 percent is used to power plastic manufacturing processes."

Make an Eco-Friendly Choice

Reducing dependency on Styrofoam is the best way to decrease its production and effect on the environment. If you want to make eco-friendly choices to eliminate the use of Styrofoam, look for products manufactured from renewable resources, containing biodegradable materials, and those that are easily recycled.

OUR BAGASSE & CORNSTARCH TRAYS ARE:

YOUR ECO FUTURE-FRIENDLY SOLUTION

PLA Pbat

A photograph of three children of South Asian descent hugging each other outdoors. The child in the center is a girl with a bright smile, wearing a green shirt. She is being embraced from behind by two boys. The boy on the left is wearing a purple shirt, and the boy on the right is wearing an orange shirt. They are all looking towards the center. The background is a lush green field with some white flowers.

We reclaim left overs stalk material and
use it to make our wheat straw products

Eco Future-Friendly

DID YOU KNOW?

Tea bags are made with 25% or more of plastic which sheds billions of microplastic particles when brewed that you ingest.

This is not only bad for your health but also for the environment. Only in the UK it is estimated that around 60.2 billion cups of tea are consumed each year. It is also estimated that 96% of TEABAGS used CONTAIN NON-BIODEGRADABLE POLYPROPYLENE.

The image features a teal background with a horizontal dark grey band across the middle. The word "Cornstarch" is written in white, bold, sans-serif font within this band. The background is also filled with a field of yellow flowers, likely rapeseed, which are slightly out of focus, creating a soft, natural aesthetic.

YOUR ECO FUTURE-FRIENDLY SOLUTION

A low-angle, upward-looking photograph of a dense bamboo forest. The image captures numerous tall, slender bamboo stalks that rise vertically towards the sky. The bamboo has a characteristic segmented appearance with dark green culms and lighter green nodes. Sunlight filters through the dense canopy of leaves at the top, creating a dappled light effect and highlighting the texture of the bamboo. The overall atmosphere is serene and natural.

Bamboo Fiber

ABOUT OUR WATER SOLUBLE PRODUCTS

WATER SOLUBLE MASKS

WATER SOLUBLE LAUNDRY BAGS

CONTACT US

YOUR ECO FUTURE-FRIENDLY SOLUTION

MORE ABOUT OUR WATER SOLUBLE PRODUCTS:

Our water-soluble products dissolve instantly in hot water, the water temperature required varies between 60°C and 90°C depending on the product.

Once dissolved the remaining are composed by Water and Carbon Dioxide which don't harm the environment nor the wastewater systems in any way.

Our water-soluble products are completely home and industrial compostable and convert into compost.

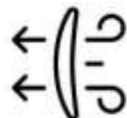

If by any circumstances it is discarded into the environment it will also decompose naturally in the soil. If thrown in a garbage bin, it will also decompose within 180 days thanks to the liquids and microorganisms found in the garbage. Research has indicated that PVOH is biodegraded by more than fifty-five species of microorganisms (Many of which are commonly found in municipal and industrial wastewater treatment systems.)

It can also be recycled, although there is no need for our water-soluble products to be recycled since it dissolves in water (It will dissolve at some point in the washing process.)

***Please download the complete spec sheet, instructions and MSDS sheet from our website:

WATER SOLUBLE LAUNDRY BAGS:

**TOWARDS KEEPING PEOPLE SAFE
WITHOUT COMPROMISING THE ENVIRONMENT**

Our bags are ideal for hospitals and nursing homes wishing to minimize contact between staff & infected laundry. They are also ideal for hazardous waste facilities.

Soiled linen has been identified as a source of large number of pathogenic microorganisms. There is a high risk of disease transmission that happens when carrying soiled & infected bed linens and patients garments.

Thanks to our laundry bags Hospital staff don't have to manipulate dirty linens and risking contamination, the laundry bag containing dirty linens from the hospital is tossed directly into the washing mashing.

Collecting of dirty and infected items into our water soluble bags protects against contagious diseases as well as biodegradable & environmental friendly.

***Please download the complete spec sheet, instructions and MSDS sheet from our website: www.ncdcorporation.com

NCD
CORPORATION

BAGS

100% WATER SOLUBLE

**100% BIODEGRADABLE
& COMPOSTABLE**

WATER SOLUBLE LAUNDRY BAGS:

GENERAL SPECIFICATIONS & IMPORTANT INFORMATION:

- Our bags holds wet or damp linens for some time without rupturing.
- Our bags dissolves completely in water at 60°C, 65°C.
- Our bags won't damage fabrics, equipment nor waste water systems.
- They are highly resistant to most organic solvents, greases, fats & oils.

THE ADVANTAGES ARE:

- Infected laundry is only handled at source.
- Microorganisms can't multiply.
- Minimize risk of infection to staff and residents.
- Minimize risk of cross contamination.
- Sealed airtight permitting the dirty laundry to be safely transported near aseptic areas.
- Ammonia can't form due to lack of oxygen therefore urine smells are not produced.
- Laundry can be transported safely in cars e.g. community laundry.

YOUR ECO FUTURE-FRIENDLY SOLUTION

ABOUT CANNABIS INDUSTRY

The cannabis industry is growing at an exponential pace. With the legalization of Hemp, the growth of CBD and new states and countries legalizing, the marijuana sector is at an all-time high.

- Medical marijuana emerged as the largest marijuana type segment in 2016 and is estimated to be valued at USD 100.03 billion by 2025 - *Grand View Research*
- The global legal marijuana market is expected to reach USD 146.4 billion by end of 2025 - *Grand View Research*
- By product type, marijuana buds segment was estimated to be dominant in 2016 with a revenue share of 62.9% and is estimated to be valued at USD 82.9 billion by end of 2025 - *Grand View Research*
- Sales of legal cannabis only in the U.S. amounted to nearly \$10 billion in 2018 alone. - *Fit Small Business*
- A regulated dispensary averages about \$3 million per year in revenue.- *Fit Small Business*
- Annual operating costs for a regulated dispensary average about \$1.92 million annually.- *Fit Small Business*
- About 18% of American consumers aged 18 to 29 use marijuana.- *Fit Small Business*
- Most people spend an average of \$25 to \$50 per trip at a marijuana retailer. - *Fit Small Business*
- There were 9,397 active licenses for marijuana businesses as of 2017. - *Fit Small Business*

MORE ABOUT CANNABIS INDUSTRY

- Legal sales could hit more than \$22 billion by 2022 – *Fool.com*
- Recreational pot sales could double medical sales by 2022 – *Fool.com*
- Total U.S. cannabis demand is \$52.5 billion – *Fool.com*
- Fully legalized cannabis could eventually top U.S. cigarette sales – *Fool.com*
- Capital raising from North American public cannabis companies totaled \$394.1 million in January of 2019 alone – *Flow Hub*
- The forecasted growth of the US cannabis industry is up to \$80 billion – *Flow Hub*
- Revenue from the CBD category is forecasted to reach \$1 billion per year – *Flow Hub*
- Sales of legal recreational and medical cannabis in the United States in 2017 topped those of Oreos and organic produce combined. – *MJ Biz Daily*
- Spending on legal cannabis worldwide is expected to hit \$57 billion by 2027 – *Forbes*
- Australia's legal cannabis market is forecast to grow from \$52 million in 2018 to \$1.2 billion in 2027, the 5th largest in the world. – *Forbes*
- Germany is poised to be the leader of the European cannabis market, and Italy is expected to be second with \$1.2 billion in sales by 2027. – *Forbes*
- 55 million Americans are cannabis users. – *Fit Small Business*

ENVIRONMENTAL ISSUES DUE TO CANNABIS INDUSTRY'S GROWTH & WHAT WE PROPOSE:

The rise of legal cannabis and its industry development has introduced a growing and alarming environmental cost;

- shoddy farming practices
- the advent of disposable consumption methods
- clunky packaging mandated by law - EXCESS OF SINGLE USE PLASTIC WASTE

All of this has created waste that the industry doesn't have a good way to handle.

Take a look at what we are doing to create a more eco future-friendly solutions by adapting some of our regular packaging to be suitable for the cannabis industry.

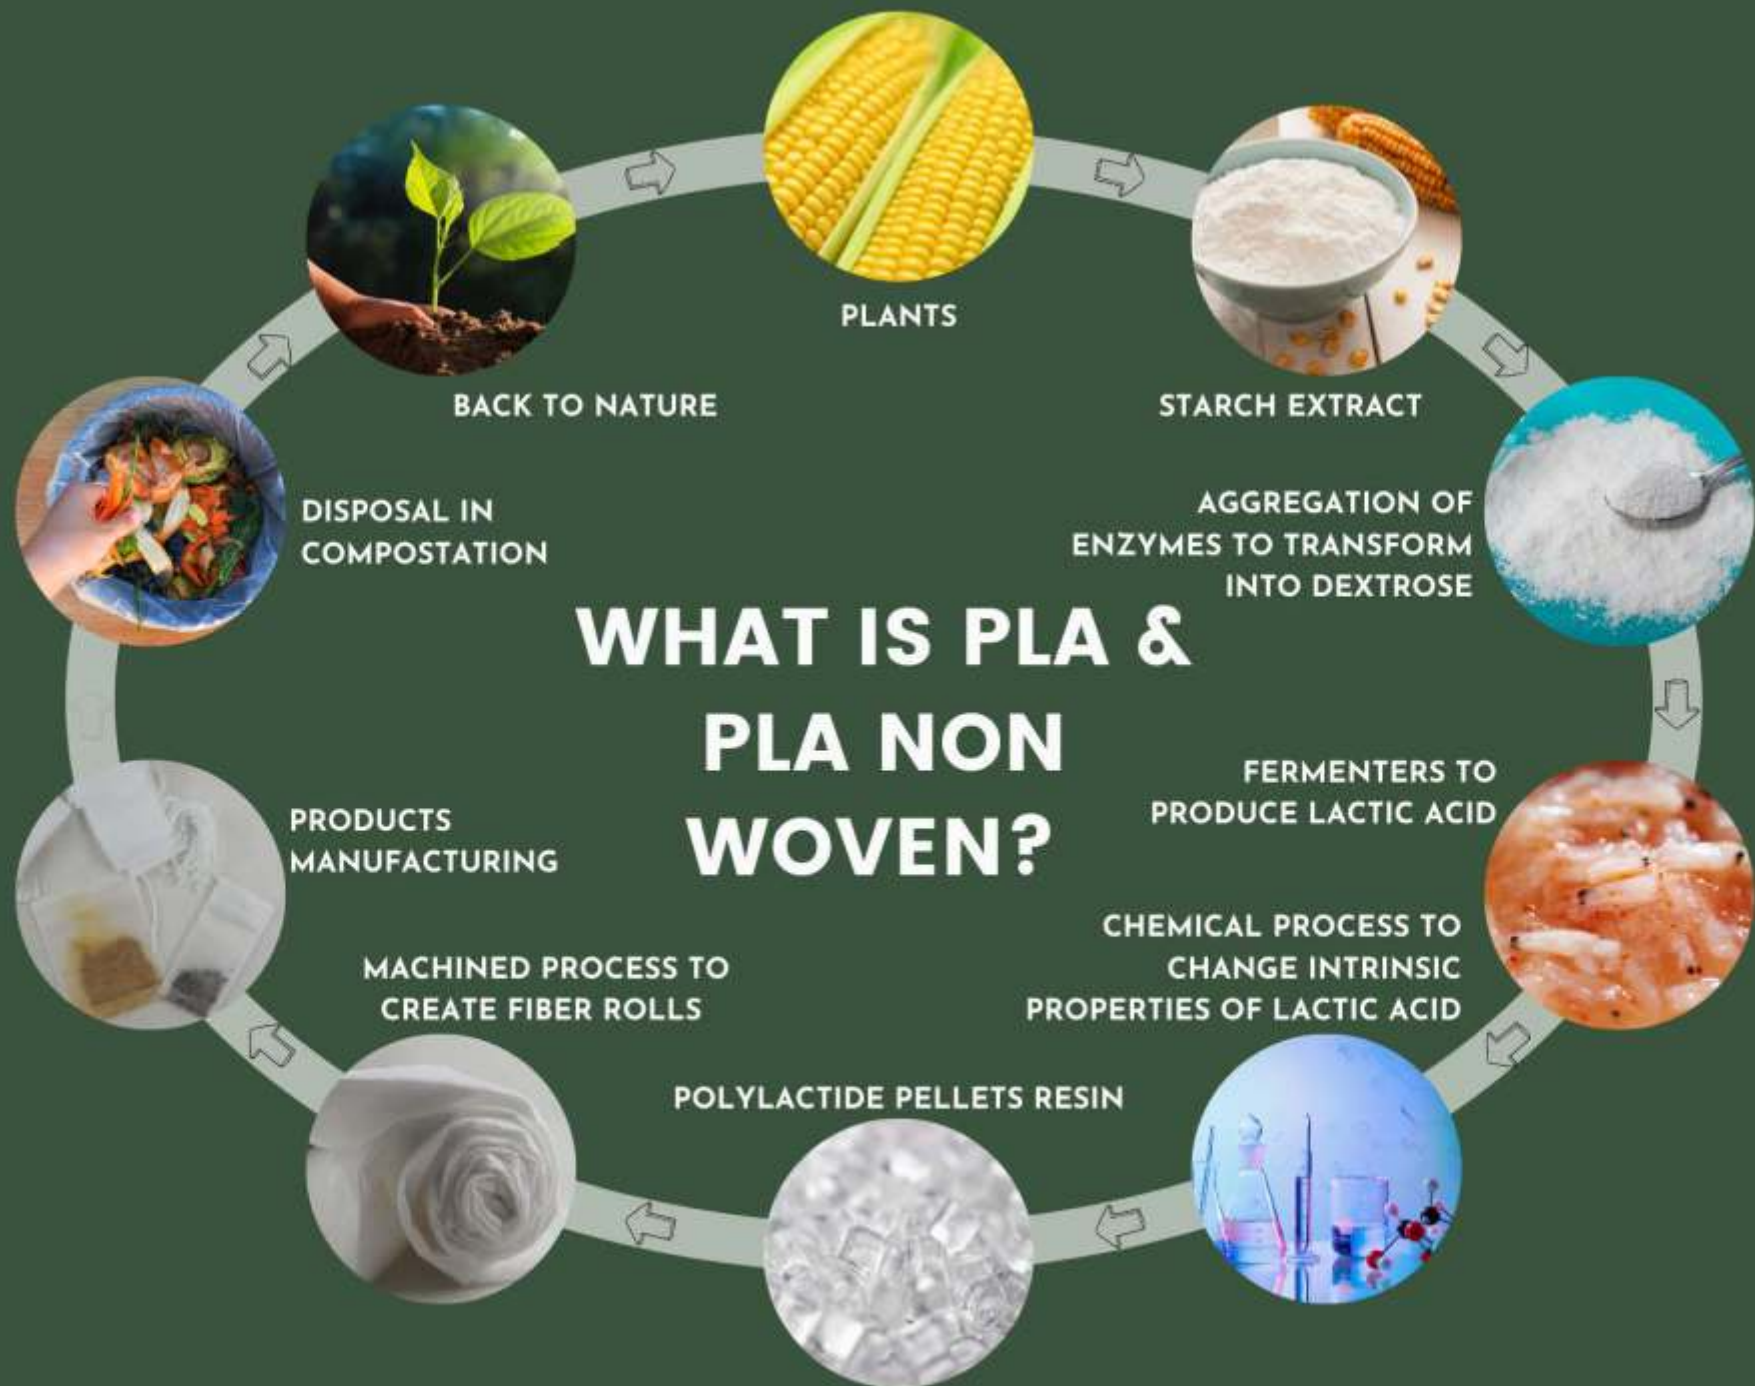

As global awareness of climate change increases, more people are learning about all the different choices they can make to do their part in combating these issues of excess waste and it is NCD CORPORATION's mission to research and develop ECO FUTURE-FRIENDLY SOLUTION for all industries.

The fact that the cannabis industry is so tightly regulated means that providers are more or less at the mercy of the legal market requirements where single-use plastic seems to be practically the only solution. For example; child-resistant packaging, which requires an additional layer of plastic packaging across the supply chain which ends up in extra plastic waste.

Within this catalog you will find great alternatives to plastic like PLA, PAPER, BAMBOO FIBER, WHEAT STRAW, RECYCLED PLASTIC and GLASS containers and bags that ensure the quality and legal security requirements.

PLA PRODUCTS

FROM NATURE AND BACK TO NATURE IN THE FORM OF NUTRIENTS TO THE SOIL

OUR PLA & PLA NONWOVEN PRODUCTS ARE:

100% Plant Based made of Non woven PLA Cornstarch

100% Compostable

YOUR ECO FUTURE-FRIENDLY SOLUTION

A top-down photograph of two children on a light-colored wooden floor. The child on the left, wearing denim overalls, is holding a dark aluminum can. The child on the right, wearing a grey long-sleeved shirt, is holding a dark aluminum can to their face. In the background, there are three large green arrows pointing right, two rolls of brown paper, and a stack of brown paper bags tied with string. The text "Aluminum Containers" is overlaid in white on a dark horizontal band.

THE ALUMINUM ADVANTAGES

Key Sustainability Performance Indicators for the Aluminum Industry

- Recycling one aluminum can saves enough energy to listen to a full album on your iPod. Recycling 100 aluminum cans could light your bedroom for two whole weeks.
- Aluminum containers are lightweight, stackable and strong, allowing brands to package and transport more using less material.
- Most of all, aluminum can be recycled over and over again in a true "closed loop" recycling process.
- Industry Recycling Rate
 - In 2019, the industry recycled 42.7 billion cans for an industry recycling rate of 55.9%.
 - Recycling aluminum saves more than 90% of the energy that would be needed to create a comparable amount of the metal from raw materials which is both a business and environmental win for the industry.
- Nearly 75% of all aluminum produced is still in use today.
- Believe it or not, a 10% increase in aluminum end-of-life recycling rates decreases industry greenhouse gas emissions by 15%.

- **Recycled Content**

- Aluminum containers are unique in that they are most often recycled directly back into themselves meaning that they have a very high percentage of recycled content.
- Since it takes just 8% of the energy to produce aluminum from recycled material versus producing new aluminum, high recycled content is a good indicator of environmental footprint. The recycled content calculation includes metal from both post-consumer and post-industrial scrap sources and complies with ISO reporting standards.

- **Value of Material**

- Aluminum helps make municipal recycling programs possible. Many such programs rely on re-selling recycled material and the high value of aluminum in the recycling stream effectively subsidizes the recycling of less valuable materials in the bin.
- The report finds that aluminum scrap is worth \$1,210/ton on average versus \$237/ton for plastic (PET) and \$21/ton for glass. Without aluminum, very few curbside pickup programs would be financially viable.

YOUR ECO FUTURE-FRIENDLY SOLUTION

A warm, close-up photograph of a man and a young girl. The man, with a beard and wearing a light blue shirt, is smiling and holding a glass jar filled with orange juice and a straw. The girl, with her hair in a bun and wearing a light blue shirt, is also holding a similar glass jar with orange juice and a straw. The background is softly blurred, suggesting an outdoor setting. A semi-transparent dark banner with the text "Glass Containers" is overlaid across the middle of the image.

GLASS RECYCLING FACTS:

Glass is 100% recyclable and can be recycled endlessly without loss in quality or purity.

Glass is made from readily-available domestic materials, such as sand, soda ash, limestone and "cullet," the industry term for furnace-ready recycled glass.

Recycled glass can be substituted for up to 95% of raw materials.

Manufacturers benefit from recycling in several ways:

- Recycled glass reduces emissions and consumption of raw materials

- It extends the life of plant equipment, such as furnaces

- It saves energy

Recycled glass containers are always needed because glass manufacturers require high-quality recycled container glass to meet market demands for new glass containers.

Recycled glass is always part of the recipe and the more that is used, the less is the energy needed.

This makes using recycled glass profitable in the long run, lowering costs for manufacturers and benefiting the environment.

Some recycled glass containers are not able to be used in the manufacture of new glass bottles and jars or to make fiberglass because they are contaminated or the recycled glass pieces are too small to meet manufacturing specifications. Nothing goes to waste and these "secondary" batches are then used for non-container glass products like tiles, filtration, sand blasting, concrete pavements and parking lots.

The recycling approach that the industry favors is any recycling program that results in contaminant-free recycled glass.

****Source: Glass Recycling Facts - Glass Packaging Institute (gpi.org)*

GLASS RECYCLING STATISTICS:

Glass bottles and jars are 100% recyclable and can be recycled endlessly without any loss in purity or quality.

In 2018, according to the U.S. EPA

- 39.6% of beer and soft drink bottles were recycled.
- 39.8% of wine and liquor bottles were recycled.
- 15.0% of food and other glass jars were recycled.
- In total, 33.1% of all glass food and beverage containers were recycled.

3.35 million tons of recycled glass is annually purchased by the container & fiberglass industry collectively. of Which is all been remelted and repurposed into new containers and fiberglass products. (Sources: Precision Consulting, NAIMA)

Over a ton of natural resources are saved for every ton of glass recycled.

Energy costs drop about 2-3% for every 10% cullet used in the manufacturing process.

1 ton of carbon dioxide is reduced for every 6 tons of recycled container glass used in the manufacturing process.

According to the Container Recycling Institute where there are a container deposit system in place through legislations the average glass container recycling rate reaches over 63% against 24% for places without recycling system.

Beverage container deposit systems provide 11 to 38 times more direct jobs than curbside recycling systems for beverage containers.

Recycling 1,000 tons of glass creates slightly over 8 jobs. (Source: Container Recycling Institute).

****Source: Glass Recycling Facts - Glass Packaging Institute (gpi.org)*

Glass Container Recycling Loop

Glass bottles and jars are 100% and infinitely recyclable

*MRF (Material recovery facility recovery facility is a specialized plant that receives, separates & prepares recyclable materials for manufacturers.

***Source: Glass Recycling Facts - Glass Packaging Institute (gpi.org)

GLASS BOTTLES

A close-up, profile view of a woman with blonde hair drinking from a glass bottle. The bottle has a yellow, textured sleeve and a white plastic handle. The woman's face is in focus, and she is looking slightly upwards. The background is a plain, light-colored wall.
